

VEGETABLE PLANT PART EXPLORATION

Explore the different parts of a plant and identify which parts we are eating of certain veggies!

Identify which description goes with each plant part on the plant picture below!

This part of the plant holds the plant up and carries water and nutrients to the different parts of the plant.

This part of the plant comes from a flower after the petals fall off and it protects the seeds.

This part of the plant carries little plants inside them. Each one has plenty of food to feed a new tiny plant.

This part of the plant makes food. They let air and water come and go through little openings and catch energy from the sun to turn the air and water into food.

This part of the plant is underground and holds the plant up. It sucks up all the nutrients and water from the soil and stores food for later on.

This part of the plant attracts pollinators, like birds and bees. They also make seeds.

PLANT PARTS DANCE

Get moving and learn your plant parts with this dance that will have you transform into a plant!

 Squat down, your fingers dig into the dirt and you are the part of the plant that is looking for water and nutrients underground. You are the... root!

 Stand up straight and tall with your arms at your side. You are the part of the plant that sucks water out of the ground to send to the rest of the plant. You keep the plant sturdy and strong. You are the... stem!

 Stick your arms out to the side and face your palms up, you are the part of the plant that soaks up sun and creates energy for the rest of the plant. You are the... leaves!

 Bring your hands to your face and spread your fingers wide. You are the colorful, beautiful, fragrant part of the plant that attracts pollinators. You are the... flower!

 Bring your hands together above your head to form a big circle. You are the delicious part of the plant that protects the seeds. You are the... fruit!

 Open your hands, spread your fingers, and wiggle them to make a "rain" motion as you float your hands down to the ground. This part of the plant will make new plants when it is dispersed. You are the... seed!
