

Zip and Grow!

Grow your seeds in a plastic ziploc bag! Follow these instructions to get your seeds started growing:

1. Fill a sealable plastic bag with soil.
2. Lay it flat on its side and cut one or two small Xs in the middle of one side.
3. On the other side of the bag, make several small holes with a fork for drainage.
4. Plant a seed that is in season right inside each X and water to make sure the soil is moist.
5. Put it in a sunny spot and watch it grow! Make sure to place it on a towel or plate to catch the water that drains out.

Log your observations as your plant grows! Take pictures and email them to Grace Green Pepper at grace@foodliteracyproject.org

Observations

Where did you place your bag? How many days did it take for the seeds to germinate (send up a sprout)? How many centimeters is your plant growing each day?

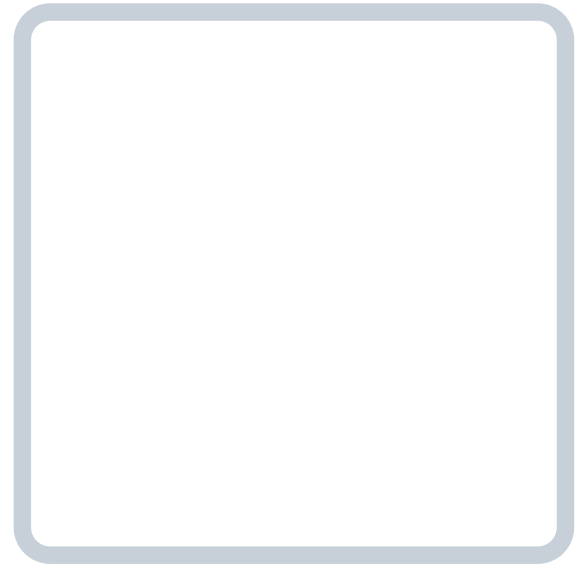

Day 1 (planted seeds and watered):

Day 3:

Day 5:

Day 7:

Day 9:

Draw a picture of your seeds
as they grow
